ALUMINUM BRITE

LIQUID DESCRIPTION:

ALUMINUM BRITE is a strong acidic cleaner and brightener for aluminum surfaces. It is a combination of organic surfactants, solvents and inorganic acids. It is designed to etch aluminum surfaces at a rapid rate removing the oxides and other contaminants. ALUMINUM BRITE will remove road film and exhaust carbon with ease.

DIRECTIONS:

-ALUMINUM BRITE is designed for use with or without mechanical agitation such as brushes and mops and can be used in hot or cold water.

-To avoid corrosion, mix solution in a plastic pail or other suitable container. It can be diluted from 3:1 to 50:1 with water depending on application.

-Apply solution to surface to be cleaned with brush or sprayer, working in small sections from the bottom upward to avoid streaking. Allow solution to remain on surface for 3 to 5 minutes. Do not allow surface to dry out during application.

-Agitate surface with a long handle brush to remove heavy soils, and then rinse with clear water. Make certain that all traces of solution are rinsed away.

-Avoid contact with glass or porcelain surfaces as product will etch. Should not be used on polished aluminum. If contact should occur, rinse immediately with water.
